DINNERWARE

•PLA •BAMBOO •STRAW

1. Why Bamboo Fiber based?

Bamboo is the fastest growing plant on earth and can be harvest in half a year. This rapid growth has a minimal impact on the environment. There is no use of pesticides.

2. Is dinnerware biodegradable?

The main components of dinnerware is plant and bamboo and can therefore digest. When the material comes into contact with enzymes, it will decompose after a period of time. Bamboo and starch will soon disappear while the artificial resin needs much longer time. It is our aim to make also the resin natural based in order to speed up the process of biodegrading.

3. How long dose this degradation process take?

With normal use, dinnerware does not break. Only when it comes into contact with certain enzymes(say, below ground) the digestion will start. Depending on the size of the product, this process takes 12 to 24 months.
